

WATER WISE NEWSFLASH

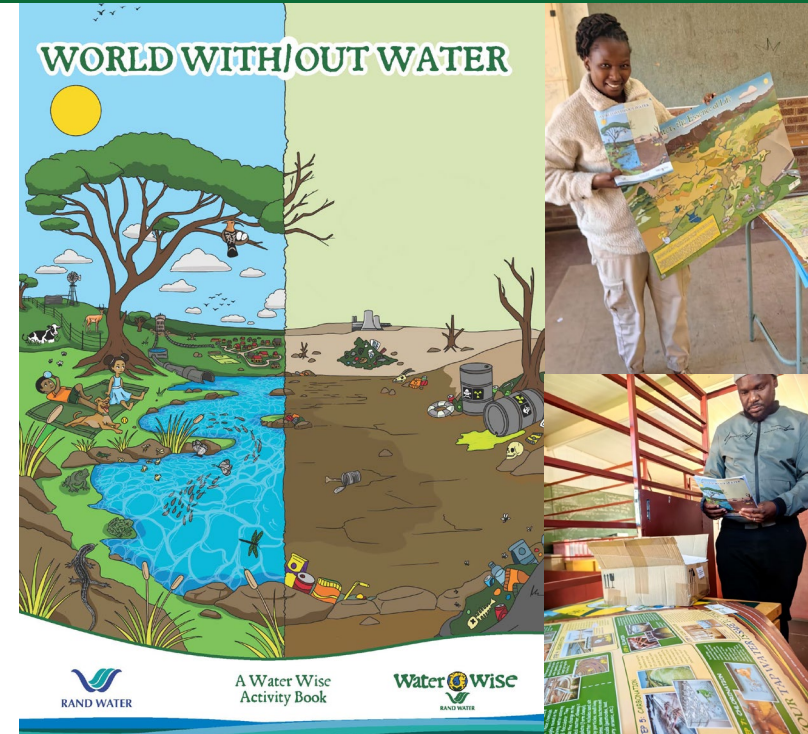

WORLD WITH/OUT WATER ACTIVITY BOOK

A 20-page activity book entitled "Water with/out Water" was produced for Grades 7-9 by the Water Wise Education Team, in line with the school curriculum. This book addresses water supply, water demand, water quality, water security and water conservation through information and activities. It was distributed by Pick n Pay School Club to 100 high schools reaching 10 000 learners, +/- 15 000 parents and 300 teachers in Pretoria, Mamelodi, Mogale, Johannesburg, Ekurhuleni, Soweto, Emfuleni, and Midvaal. Various Water Wise posters were also distributed to these high schools together with the activity book, which can be used in conjunction with the book. The book was also made available electronically on the Water Wise and Pick n Pay School Club websites so that it could be downloaded by other schools and used for various educational initiatives. Positive comments were received from teachers:

"It will definitely teach them because the images explain the importance of saving water and with them having experienced times without water, that experience will make them value water even more." - Ms Precious Moremi, Rephafogile Secondary School.

"The water wise material is of great value and importance as it makes learners aware of the importance of water and also how to preserve it." - Ivy Muza, J Kekana Secondary School.

The activity book is available for free download from the Water Wise website:
