

Water Wise hygiene tips to help fight COVID-19

- You can save water by using alcohol-based wipes and sanitizer to disinfect hands and surfaces. Please dispose of these responsibly.

- After using tissues/paper towel to wipe hands or face, please throw them into a rubbish bin.

- Wash hands with soap for 20 seconds before and after every activity. Remember to turn the tap off while you lather your hands.
- Disinfect after using the toilet or kitchen, so that you don't spread any viruses.

Always be Water Wise!
