

# WORLD ENVIRONMENT DAY

# DAY

05 June  
2024

World Environment Day is an international day of environmental awareness and action that is celebrated on the **5th of June** each year. This year's campaign focuses on **land restoration, desertification and drought resilience** under the slogan **"Our land. Our future. We are #GenerationRestoration."** The campaign highlights the need for accelerating land restoration, enabling drought resistance and limiting the desertification progress.

## HERE'S HOW YOU CAN MAKE A DIFFERENCE THIS #WORLDENVIRONMENTDAY:

Enhance the sustainability of **food systems** by buying locally to support local farmers and decrease greenhouse gas emissions.

Join the **Freshwater Challenge** to restore degraded rivers and wetlands by 2030 and conserve freshwater ecosystems.

Bring back the buzz by attracting **pollinators** (bees, birds and butterflies) to gardens by planting diverse native flowers.

Explore how to create a **micro-forest in urban** areas using the Miyawaki method.

Improve **soil health** by using kitchen **waste as compost** for gardens or balconies, or by participating in composting programs.

Our **food production** and consumption practices are responsible for over 80% of biodiversity loss.

Planting **trees** along streets can reduce the maximum temperature in urban areas by up to 5 degrees Celsius.
